

The best way to build forms and forms-based processes in iMIS RiSE

Designing forms with a complex submission process, where the submission content matters, or where form completion is important?

WebFormZ offers top-of-the line enhancement for building forms and form-based processes in iMIS 20 RiSE. Now the latest version, WebFormZ+, delivers responsive forms that work as well on mobile devices and tablets as on the desktop.

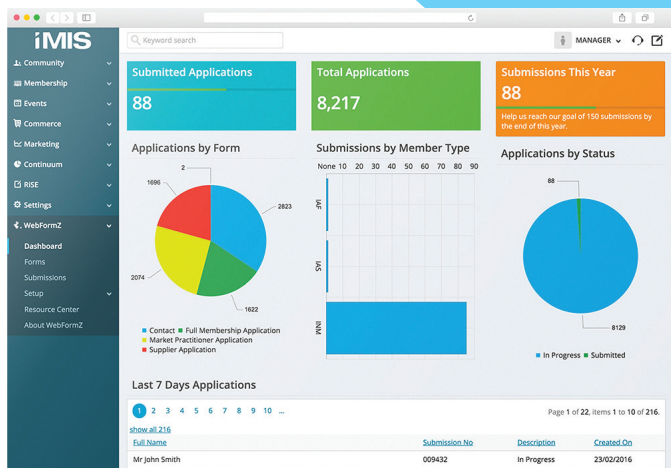

### Sophisticated iMIS Forms

iMIS already has the ability to define fields and create simple forms. But when you need form capabilities that go beyond the basic functionality in iMIS, WebFormZ is the answer. You can build forms for:

- Membership applications
- Membership renewals, with custom demographic updates
- Approval system for membership profile updates
- Speaker abstract submissions
- Event registration
- Award nominations
- Scholarships and grants
- Collecting information from anonymous website visitors

### Form Processing Features

With WebFormZ, you have the flexibility to design forms in the way that provides the greatest efficiency for your association. You can track the workflow and control the form submission process more effectively than with iMIS alone.

- Forms can be anonymous or require sign-in.
- Forms can generate emails, PDFs, and activity records.
- Real-time calculations are visible.
- Submission records are auditable.
- Form data can be validated.
- iMIS database can be updated in a controlled way.

WebFormZ allows even non-technical users to quickly create form processes and to deploy forms directly from iMIS software. Users with more technical skills can use IQA, Stored Procedures, Workflow, and other features of iMIS to maximize productivity and engagement.

*WebFormZ and WebFormZ+ are available in two license packages, Advanced or Enterprise:*

**Advanced** contains the tools to build form systems for staff sites and public users within RiSE. Advanced supports dues processing and other payments. It also supports anonymous forms, account creation, and interest gathering.

**Enterprise** offers users who want more functionality all the WebFormZ modules plus support for advanced reviews, gifts, orders, events, committees, relationships, PDF creation, and the powerful Execute SQL Action. Enterprise also includes support for all types of iMIS ecommerce. The software provides a powerful review processing system for staff and others to review, mark, and approve submissions.

*WebFormZ and WebFormZ+ are products of iFINITY plc, based in the United Kingdom. ISG Solutions is an authorized solution provider for iFINITY.*
